Education

University of Guelph

Hons. Bachelor of Computing, Computer Science (GPA 3.94 / 4.00)

Expected May 2026

Guelph, ON

Experience

Amazon Web Services

September 2025 – December 2025

Incoming SDE Intern on RDS for Oracle team building cloud database services

Vancouver, BC

Shopify

May 2025 – August 2025

Software Engineer Intern

Toronto, ON, Canada

- Designed and developed an **AI command line assistant** that surfaces relevant slack channels, docs, and summarizes code changes for any commit by querying internal **Model Context Protocol** servers in **Python** and analyzing Git metadata, enabling developers to gather context in their development environment through natural language
- Engineered **React UI components** to let merchants set up and configure social providers as a method of authentication for their storefront, contributing to the major release of social logins including Shop, Google, and Facebook
- Implemented session revocation logic for social providers, **protecting millions of customer accounts and user sessions**
- Created and exposed **GraphQL** powered OAuth endpoints (authorization, token, logout URLs) in Shopify's Admin dashboard, **adopted by over 2 million merchants** to power custom domain login flows for headless ecommerce stores

Ansys

May 2024 – December 2024

Software Engineer Intern

Waterloo, ON

- Migrated user preference and workflow features from a desktop product to a web interface using **React** and **REST APIs** to offload computational tasks to Ansys servers and **eliminate local compute power needs for over 1 million users**
- Owned and delivered a **React and Redux module** that standardized keyboard shortcut implementation across 3 consumer-facing web applications, with support for app-specific customizations
- Integrated **Cypress** end-to-end tests into CI/CD pipelines, resulting in **25% less incidents** related to user workflows

Google Developer Student Club

August 2023 - August 2024

Software Developer & President

Guelph, ON

- Founded the Developer Student Club at Guelph, growing it into the school's largest community with **300+** members
- Raised **over \$25,000** from sponsors and directed **over 30** people across multiple teams to coordinate a 3-day hackathon that hosted **over 200** participants, **over 20** workshops, and **received recognition from Google**
- Built a **Next.js** hackathon platform using serverless architecture, managing **600+** applicants and **5,000 monthly visitors**

Saige

January 2023 – August 2023

Software Engineer Intern

Vancouver, BC

- Developed and deployed a multi-channel notification system to production using **AWS** (Lambda, SQS, SNS), **Firestore**, and Twilio, delivering email, SMS, and push notifications to **more than 10,000 monthly active users**
- Scaled an internal **Python** analytics service to handle **10x more queries** with **20% lower latency** by adding connection pooling and batching
- Led the redesign of a high-impact page using **React**, overseeing 3 interns and delivering the project **2 months early**

Projects

Agentic Human Writing Assistant | Typescript, React, FastAPI, OpenAI, Google Cloud Platform

- Constructed an AI writing tool that produces high quality humanized content by using a **multi-agent AI architecture** that strategically refines outputs to meet user defined criteria, resulting in **100+ prerelease signups**
- Built an AI chat feature with workspace context and a **persistent memory layer** to provide personalized suggestions
- Architected deployment with GCP using **App Engine for backend APIs** and serving the **React** frontend from **GCS**

Skills

Languages Python, JavaScript, TypeScript, Java, C, Ruby, GraphQL, SQL, HTML, CSS
Technologies React, Redux, Next.js, Node.js, Express, Flask, Cypress, AWS, GCP, Docker
