EDUCATION

University of Guelph

Hons. Bachelor of Computing, Computer Science (GPA 3.94 / 4.00)

Expected May 2026

Guelph, ON

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, C, C++, Ruby, Go, GraphQL, SQL, HTML, CSS

Technologies: React, Redux, Next.js, Node.js, Express, Flask, Cypress, AWS, GCP, Docker

EXPERIENCE

Amazon Web Services (AWS)

September 2025 – December 2025

Software Development Engineer Intern

Vancouver, BC

- Designed and implemented a middleware layer for Oracle Database on AWS using **Java** that intercepts all incoming requests and delivers customer availability zone mappings to OCI, processing **millions of monthly requests**
- Developed a custom caching layer preloaded with availability zone mapping data from **DynamoDB** during **Lambda** initialization, reducing lookup latency to **under 3 ms** and ensuring stability during peak load events
- Refactored storage models and workflow APIs to enable private-network service integrations for **over 10,000** Oracle Database networks shared through AWS Resource Access Manager (RAM)
- Led an AI workshop for **40+ engineers** on codebase organization and prompt-driven development with LLMs

Shopify

May 2025 – August 2025

Software Engineer Intern

Toronto, ON

- Protected **over 40 million** monthly active users by implementing session invalidation logic in **Ruby** that automatically logged out accounts when third-party credentials were compromised
- Delivered **GraphQL** OAuth endpoints for headless eCommerce store logins, adopted by **2 million** merchants
- Pioneered an AI command line tool in **Python** that leveraged **Model Context Protocol** (MCP) servers to surface internal Slack channels, docs, and code diffs allowing developers to search internal context using natural language
- Created **React** components letting merchants add social identity providers (Google, Facebook, Shop) to their store

Ansys

May 2024 – December 2024

Software Engineer Intern

Waterloo, ON

- Migrated workflow steps from a desktop product to a web application using **React** and **REST APIs** to offload processing to cloud servers and eliminate the need for local compute resources for **over 1 million users**
- Built a shortcut framework with **React** and **Redux** adding customizable hotkeys to a web-based 3D model viewer
- Simulated complex user workflows using **Cypress** to write end-to-end tests, achieving **over 95%** code coverage

Google Developer Student Club

August 2023 – August 2024

Software Developer & President

Guelph, ON

- Founded Guelph's Developer Student Club, growing it to **over 300** members in less than a year
- Raised **\$25,000+** from sponsors and managed **30** people across multiple teams to coordinate a 3-day hackathon that hosted more than **200** participants, included **20+** workshops, and received recognition from Google

Saige

January 2023 – August 2023

Software Engineer Intern

Vancouver, BC

- Developed and deployed a multi-channel notification system to production using **AWS** (Lambda, SQS, SNS), **Firebase**, and Twilio, delivering email, SMS, and push notifications to **more than 10,000** monthly active users
- Led the redesign of a high-impact **React** page, overseeing 3 interns and delivering the project **2 months early**

PROJECTS

Agentic Human Writing Assistant | TypeScript, React, FastAPI, OpenAI SDK, Google Cloud Platform

- Designed an AI writing platform that produces high-quality humanized content by using **GCP Workflows** to invoke **fine-tuned AI agents** to critique and iteratively refine content, attracting **100+ user signups**
